The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6, 14, 15, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Christian et al. (Christian) in view of Tiitola. Christian discloses the claimed blade construct with the exception of the use of a synthetic material to form the blade element. Christian's blade element 24 is made of wood. However, as disclosed by Tiitola it is known in the art to form the blade element of a synthetic material. It would have been obvious to one of ordinary skill in the art to have formed Christian's blade element of a synthetic material in the manner taught by Tiitola as well if it was desired to make a more durable blade.

Regarding claim 15, making Christian's shank integral with the shaft would have been obvious under *In re Larson*, 340 F.2d 965, 968, 144 USPQ 347, 349 (CCPA 1965). The examiner takes official notice that it is well known in the art that the blade and shaft portion of the hockey stick may be made integral or separable as desired.

Claims 7-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over the art as applied to claim 6 above, and further in view of Quigley.

As disclosed by Quigley the inner and outer layers of such blades may be formed of one or more layers as desired and the inner and outer layers need not be symmetrical. In view of Quigley's teaching it would have been obvious to one of ordinary skill in the art to have also have formed Tiitola's inner and outer layers of one or more layers as desired (thus allowing for

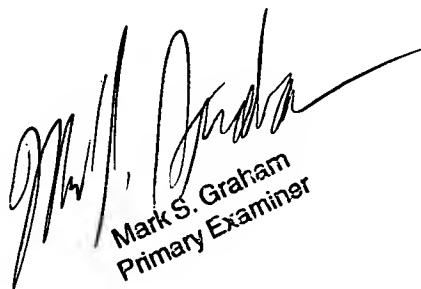

various different thicknesses) to tailor the specific performance characteristics of the blade as taught by Quigley.

Concerning claims 9 and 10, Tiitola teaches the foam which comprises fibers therein.

Applicant's arguments with respect to claims 1-15 and 19 have been considered but are moot in view of the new ground(s) of rejection.
